^{*}Column totals might not sum because of rounding and changes in share count, particularly given the recent IPO. Also, Q110 and Q210 EPS estimates and cash estimates are pro-forma adjusted for post-IPO diluted shares outstanding.

Investment Thesis:

After the close last night, Tesla Motors reported Q310 results that were better than expectations. The strength was driven by 16% more Roadster sales than we expected (151 units, up 7% QOQ) and strong Development services work for Daimler.

On the conference call, management also provided a favorable update on Model S development. The first Alpha build of the Model S is expected to be completed by the end of this year. Also, management expects to highlight the Model S at the North American International Auto Show in Detroit in mid January. Tesla has more than 3,000 reservations for the Model S, and expects that by mid 2012, it can have the first full year of production pre-sold, which is about 20,000 units.

Development Services has vastly exceeded expectations for the past two quarters, and the company hasn't even begun to realize material revenues from Toyota. In our opinion, current contracts with Toyota far exceed the existing opportunities with Daimler. To date, we believe Tesla has delivered battery packs for only about half the A-Class pilot program vehicles.

Given the solid results and favorable outlook, we reiterate our \$30 PT and Buy rating. Our PT is based on a DCF that takes into account sales of Tesla's new Model S, slated for release in 2012.

Q310 Quarterly highlights

- Tesla reported Q310 revenue of \$31MM, which beat our \$27.9MM estimate and beat the street average estimate of \$28.1MM.
- Gross margin of 30% was better than our 21.4% estimate. The beat was driven entirely by a shift toward Development services revenue.
- The Q310 net loss was \$35MM, which was greater than our \$31MM estimate but less than the street's \$39MM estimate. EPS estimates varied because of different street calculations of share counts, which should now be cleared up after the Q3 results.
- Management reiterated its previous revenue guidance of \$110MM to \$115MM. This implies a Q410 revenue range of \$29.5MM-\$34.5MM that affirms our \$32.7MM estimate.
- Tesla sold 151 Roadsters in the quarter, which was more than our estimate of 130. In addition, Roadster backlog increased sequentially. Leasing drove 20% of sales, up from previous quarters.
- Development services revenue of \$7.9MM was better than our estimate of \$4.7MM. The strength was driven almost entirely by the delivery of batteries for Daimler's A-Class prototypes.

Investment Risks:

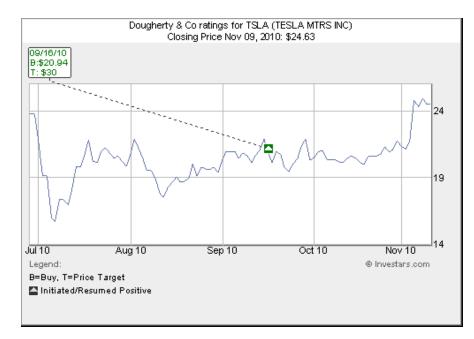

Risks that could prevent Tesla (TSLA) shares from achieving our price target include:

- Model S Progress Risks We believe that not achieving the anticipated roadmap for the Model S platform presents one of the largest risks to the stock. Supplier issues could be a source of delay. Tesla's Roadster, for example, relies on 150 suppliers for 2,000 parts. In the past, supplier delays have stalled progress on the Roadster.
- Profitability Targets Tesla's future profitability depends upon achieving 43% net cost reduction from the Roadster to the Model S. Failure to achieve cost reduction objectives would be detrimental to the company and the stock.
- CEO Leadership Dependence We believe that Tesla has been able to secure a bevy of automotive engineering and design talent. Much of that can be attributed to the leadership and vision of CEO Elon Musk. We don't expect Musk, a serial entrepreneur, to remain at the helm of the company beyond 2014. Contractually, Musk should stay on until the Model S has performed successfully.
- Withdrawal of Government Support Widespread electric vehicle adoption is encouraged by government buyer
 incentives, government emissions regulations and government grants that support technological advancement
 and buildout of the charging infrastructure. A deleterious change to the subsidies or support surrounding
 electric vehicles could create an ethanol-like failure of the concept.
- Failure of the Electric Vehicle Concept Despite the hype, electric vehicles have not proven their success as a concept. Range anxiety is a real obstacle faced by consumers. Advertised ranges are generally overstated. Like internal combustion engines, ranges vary by usage pattern, including speed, acceleration and cabin climate control, and the temperature and climate of the operating environment. This issue is much bigger for electric vehicles than for internal combustion engines, given the existing limits to their ranges. Also, we note that ethanol failed for a variety of reasons, but a key reason was poor consumer adoption at the pump vehicle range drops up to 20% when fueled by E85. (Tesla has floated the idea of swap pack batteries that can be rented for longer trips. We think that this model is unlikely to take off.)

Dougherty & Co								
Current Ratings Distribution								
Rating	% Total							
Buy	73.04							
Neutral	24.35							
Sell	2.61							

Percent of research companies within each of the three rating categories (Buy, Neutral, Sell) for which Dougherty & Company LLC has provided investment banking services within the last 12 months: Buy = 9%; Neutral = 5%; Sell = 0%.

The ratings used in Dougherty & Company LLC research reports are defined as followed:

Buy: Expected to outperform the broader market and/or its sector over the next six to twelve months.

Neutral: Expected to perform generally in-line to moderately below the broader market and/or its sector over the next six to twelve months.

Sell: Expected to materially underperform the broader market and/or its sector over the next six to twelve months.

This report has been prepared solely for informative purposes and is not a solicitation or an offer to buy or sell any security. The information contained herein has been taken from trade and statistical services believed, but not guaranteed, to be accurate, reliable or purported to be complete. Any opinions or estimates expressed in this report reflect a judgement made of this date, and are subject to change. The securities described may not be qualified for purchase in all jurisdictions. Because of individual requirements, advice regarding securities mentioned herein should not be construed as suitable for all accounts. Some securities mentioned herein relate to small speculative companies (these securities are currently below investment grade), which may be unsuitable for some accounts. Recommendations are made in a general sense, suitability for individual acquisition or sale should be a matter of discussion between the Investment Executive and the client before any transactions occur. Past performance does not guarantee future results. From time to time, Dougherty & Company LLC, or its officers, directors or agents, or members of their families, may have a position in securities mentioned and may make purchases or sales of the same in the open market or otherwise, and may own options, rights or warrants to purchase the same or a member of Dougherty & Company LLC or its affiliates may serve or have served on the Board of Directors for this company. Dougherty & Company LLC as a market maker may act as principal or agent with respect to the sale or purchase of securities mentioned, and may have managed or co-managed a public offering of the securities mentioned within the last three years. All the views expressed in this research report accurately reflect my personal views about this security. No part of my compensation was, is or will be directly or indirectly related to the views expressed in this report. Additional information is available upon request.
